Acknowledgement:

“ True guidance is like a small torch in a dark forest. It does not show everything at first, but gives enough light for the next step to be safe. “

Firstly, we would like to express our gratitude to our college and the professors, who gave us the opportunity to work on this project. Special thanks to Ms Veenu, who guided us all along the path, with suggestions and help.

Each and every person of the group worked sincerely to complete this project. We were able to learn a lot of new things while working on the project.

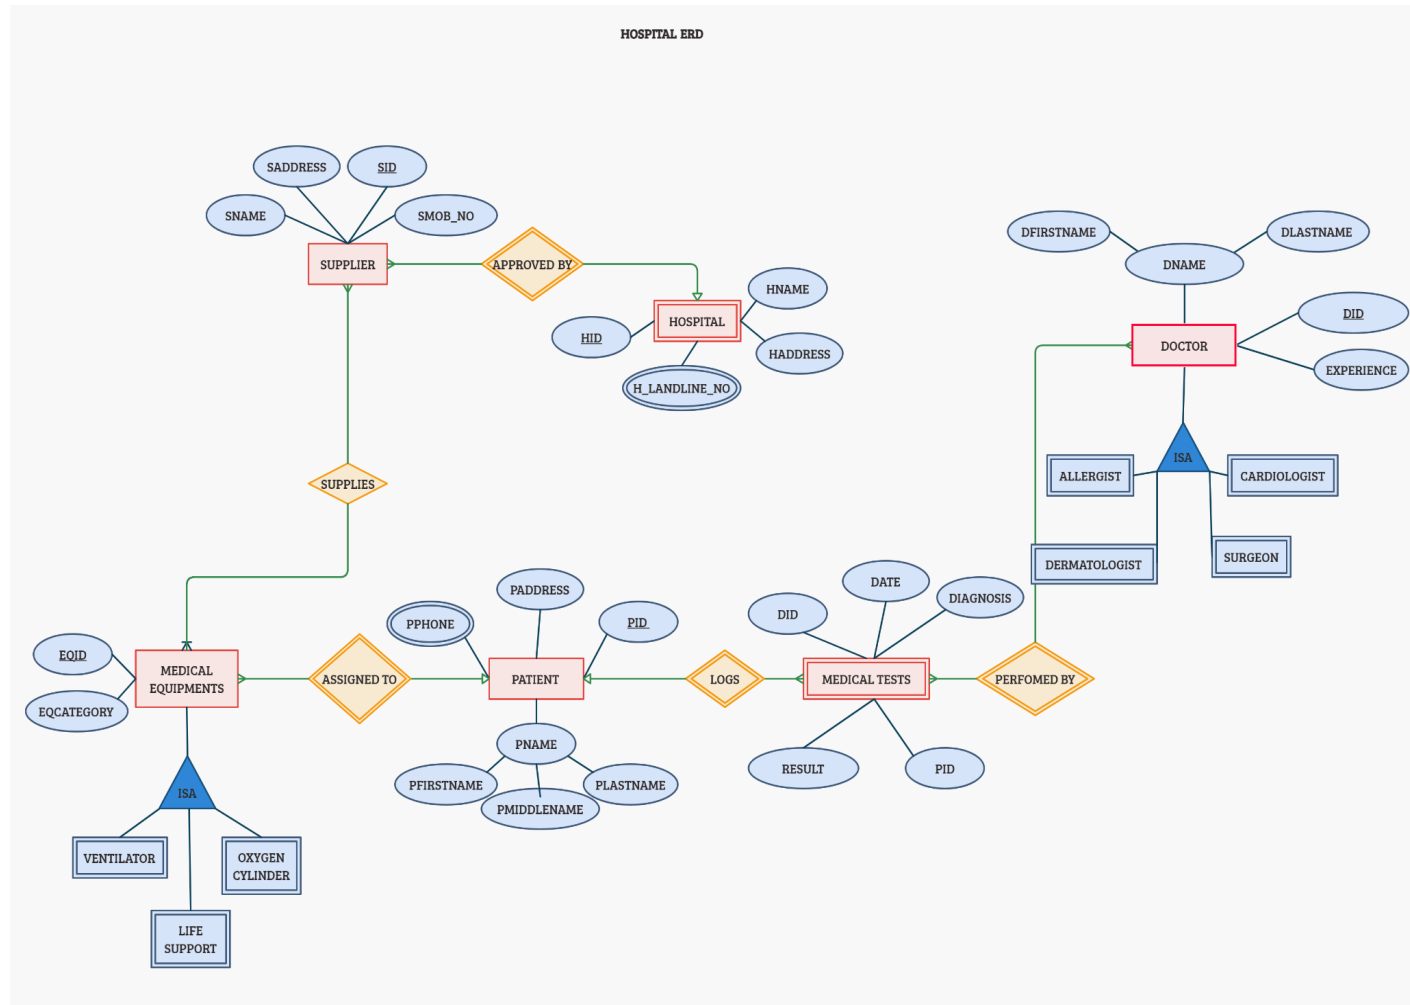

About:

Low and middle income countries face huge hurdles in getting oxygen to patients. In many countries proper systems to supply oxygen have been neglected for decades, despite pneumonia being the single biggest cause of hospital admission in low and middle income countries, even before the pandemic.

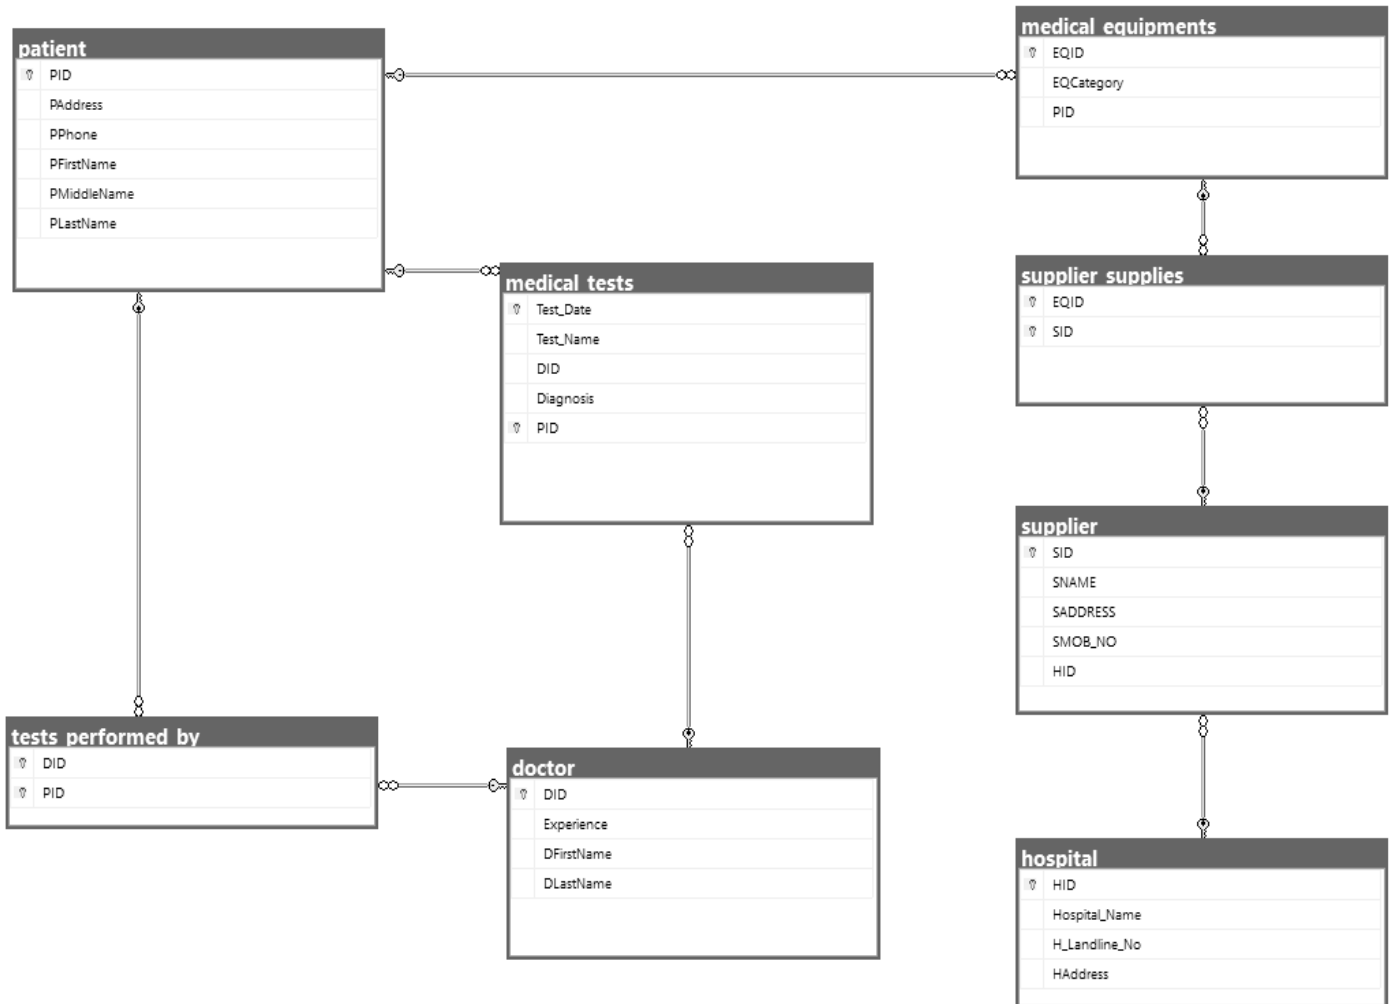

The neglect of oxygen systems has been partly market failure, partly lack of knowledge and anticipation, partly inertia.

This project aims to overcome one of the toughest problems faced during the pandemic i.e the supply and proper management of resources especially oxygen cylinders and ventilators. The second wave is a grim reminder of how the lack of a proper management system can result in loss of countless lives, and that was one of the motivations for this project.
